

Frensham Ponds Water Quality Workshop

THURSDAY 5TH OCTOBER
7.00-9.00PM
CHURT VILLAGE HALL, GU10 2JA

If your home or business is not connected to the mains sewerage network, your waste water will drain to either a Septic Tank or small Sewage Treatment Plant.

If not working properly, either system can release raw sewage, polluting natural waterbodies such as the River Wey and local beauty spot Frensham Ponds.

At this workshop we will discuss water quality issues at **Frensham Ponds** and new approaches to monitoring water quality by trained volunteers; we will also provide advice on how to maintain these systems to the best standards, helping to keep your home and your environment healthy.

Refreshments
will be available
